2. The application has been amended as follows:

Please amend claim 28 as follows:

28. A method of setting brightness control codes of a display, comprising:

driving the display;

sensing a brightness of the display;

adjusting the driving of the display until the display is driven at a predetermined brightness based on the sensed brightness; and

setting an adjusted brightness control code corresponding to the predetermined brightness of the display, wherein the driving includes initially driving the display using a brightness control code provided by a display manufacturer, and wherein setting the adjusted brightness control code includes

Art Unit: 2629

setting a new brightness control code corresponding to the predetermined

brightness, the new brightness control code replacing the brightness control code

provided by the display manufacturer, wherein the driving, sensing, adjusting and

setting are performed a plurality of times to set a plurality of different brightness

control codes corresponding to a plurality of different predetermined

brightnesses.

Please cancel claim 30.

Please amend claim 31 as follows:

31. The method according to claim 30 28, further comprising storing the

plurality of brightness control codes in a memory of the display.

Please amend claim 32 as follows:

33. The method according to claim 30 28, wherein the setting comprises

setting brightness control codes that indicate how to control an inverter that

supplies power to the display.

Please amend claim 34 as follows:

34. The method according to claim 30 28, wherein the setting includes setting

high temperature brightness control codes that provide information about how to

control a brightness of the display when the display is operating at a high

temperature.

Please amend claim 40 as follows:

40. The method according to claim 28 41, wherein the new brightness control

code is provided in an EDID format.

Please amend claim 41 as follows:

driving the display;

sensing a brightness of the display;

adjusting the driving of the display until the display is driven at a predetermined brightness based on the sensed brightness; and

setting an adjusted brightness control code corresponding to the predetermined brightness of the display, wherein the driving includes initially driving the display using a brightness control code provided by a display manufacturer, and wherein setting the adjusted brightness control code includes setting a new brightness control code corresponding to the predetermined brightness, the new brightness control code replacing the brightness control code provided by the display manufacturer The method according to claim 28, wherein setting the brightness control code occurs after adjusting the driving of the display.
